### Product Description

### Product Description

Got a more family oriented mode of transportation? Then the Sentinel three-bike trunk rack from Saris is for you. Designed to carry bicycles on vehicles with atypical body styles such as hatchbacks, sedans and passenger vans. It can be mounted over most spoilers or lighting arrays, and

carries up to three bikes. Made with adjustable arms that can be mounted securely in multiple positions, and they can also fold flat for storage. The hold-downs secure each bike independently and keep them from crashing into one another or wobbling while in transit. The hooks that secure the rack to the trunk seam are neoprene coated so they won't scratch your car's finish, and the bottom bar brace has a vinyl covered foam pad to separate the rack from your trunk lid. No assembly is required.

### Product Description

Completely assembled and ready to go, right out of the box. Unique bike hold-downs separate and firmly hold up to 3 bikes. Coated hooks protect your car's finish. Folds down flat for compact, convenient storage.

Great value,

By C. Ross - [See all my reviews](#)

This rack works great! I was not ready to invest in a hitch for my car and tried a few different trunk racks before getting this one. The six straps really help to keep the rack secure...make sure you tighten them before AND after you load the bikes. There is plenty of room for three bikes with the adjustable length arms and the individual straps to secure the bikes are much more secure than I thought they would be after my first glance. I did not feel the need to use bungee cords in addition to the straps...but might for longer car trips. This rack also fits very well over my spoiler. Great value for a trunk rack!
